## USB 2.0 High-Speed and Audio Switches with Negative Signal Capability

## Features

- Single +2.7 V to +4.4 V Supply Voltage
- Low $50 \mu \mathrm{~A}$ Supply Current
- -3dB Bandwidth: 1500 MHz (typ)
- Low $2.5 \Omega$ (typ)On-Resistance
- THD+N: 0.02\%
- Shorting D+/R and D-/L to Vbus will not cause leakage when $\mathrm{V}_{\mathrm{DD}}=0$
- Internal Shunt Resistors for Click-and-Pop Reduction
- VBUS Detection for Automatic Switch Path Selection
- Packaging ( Pb -free \& Green available):
$=10$-pin contact UQFN, $1.4 \times 1.8$, (ZM10)

## Description

The PI3USB223 combines AC coupled audio signals and USB2.0 HS ( 480 Mbps ) on the same pins. This enables users to use a single connector to drive either a USB end point or an audio end point.

PI3USB223 incorporates gate pump technology required to maintain low Ron for ideal audio THD while reducing the capacitance affect of high speed USB signals. The device also incorporates a substrate pump technology which allows - 2 V signals to pass through the switch without causing any leakage.

The PI3USB223 features protection on D+/R and D-/L to ensure no damage will happen to the IC if these pins are shorted accidentally to Vbus as well as ensuring there is no leakage when $V_{D D}$ is on or off. Also, it includes VBUS detection (VB) to automatically switch to the USB signal path upon detection of a valid VBUS signal. It also features internal shunt resistors on the audio path to reduce clicks and pops heard during output. The device is available in a space-saving $10-$ pin, $1.4 \mathrm{~mm} \times 1.8 \mathrm{~mm}$ UQFN package, and operate over the $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ temperature range.

## Truth Table

| ASEL | V $_{\text {DD }}$ | VBUS | L/R | D+/D- | L/R Shunt |
| :---: | :---: | :---: | :---: | :---: | :---: |
| X | L | L | OFF | OFF | OFF |
| X | H | L | OFF | OFF | ON |
| X | L | H | OFF | OFF | OFF |
| L | H | H | OFF | ON | ON |
| H | H | H | ON | OFF | OFF |

## Block Diagram

Pin Diagram

## Pin Description

| Pin\# | Name | Function |
| :--- | :--- | :--- |
| 1 | D- | USB D- from system side |
| 2 | R | Audio Input (Right) |
| 3 | L | Audio Input (Left) |
| 4 | GND | Ground |
| 5 | V $_{\text {DD }}$ | Positive Supply Voltage Input. Bypass $V_{\text {DD }}$ to GND with a $0.1 \mu$ F capacitor as close to the device as <br> possible. |
| 6 | D-/L | Common Terminal for D- or Left Audio |
| 7 | D+/R | Common Terminal for D+ or Right Audio |
| 8 | ASEL | Switch SEL to override VBUS detection when VBUS and VDDare both high. <br> If ASEL is HIGH, then audio path will be on <br> If ASEL is LOW then USB path will be on ASEL has an internal 3M-ohm pull-down |
| 9 | VBUS | If ASEL is tied LOW, then VBUS detection can be used for auto switching. If ASEL is LOW <br> VBUS = HIGH means USB path is active |
| 10 | D+ | USB D + from system side |

## Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

| (Voltages referenced to GND.) |  |
| :---: | :---: |
| V ${ }_{\text {DD }}$, ASEL | -0.3 V to +5.0 V |
| VBUS | -0.3 V to +5.5 V |
| $\mathrm{V}_{(\mathrm{R} / \mathrm{D}+\text { ) and }} \mathrm{V}_{(\mathrm{L} / \mathrm{D}-)}{ }^{(1)}$ | -2.0 V to +5.0 V |
| $\mathrm{V}_{(\mathrm{R} / \mathrm{D}+)}$ and $\mathrm{V}_{(\mathrm{L} / \mathrm{D}-)}{ }^{(2)}$ | -0.3 V to +5.0 V |
| $\mathrm{V}_{\mathrm{R} \text { and }} \mathrm{V}_{\mathrm{L}}$ | -2.0Vto ( $\left.\mathrm{V}_{\mathrm{DD}^{+}} 0.3 \mathrm{~V}\right)$ |
| $\mathrm{V}_{\mathrm{D}+\text { and }} \mathrm{V}_{\mathrm{D}}$ | -0.3 V to $\left(\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}\right)$ |
| Continuous Current into Any Terminal................................. $\pm 100 \mathrm{~mA}$ |  |
| Operating Temperature Range | .$-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Storage Temperature Range | ..... $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |

## Notes:

1. If Audio path is enabled
2. If USB path is enabled

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## DC Electrical Characteristics

$\left(\mathrm{V}_{\mathrm{DD}}=2.7 \mathrm{~V}\right.$ to $4.4 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$, unless otherwise noted. Typical values are at $\mathrm{V}_{\mathrm{DD}}=3.0 \mathrm{~V}$ to $3.6 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ )
