

LTC6417
LTC6417 and LTC2209
Combo Board

DESCRIPTION

Demonstration circuit 1685A features the LTC[®]6417, a 1.6GHz differential ADC buffer driving the LTC2209, a 16-bit 160MSPS ADC. The DC1685B is supplied with a bandpass filter centered at 140MHz between the buffer and ADC. The filter center frequency can be changed to optimize performance at different analog input frequencies. Both single-ended and differential configurations are supported

at the inputs. The DC1685A has been developed from the DC1281A, used to characterize LTC2209 family of ADCs.

Use the DC1685A with a DC890 FastDAACS and PScope[™] Software to collect time and frequency data.

Design files for this circuit board are available at <http://www.linear.com/demo/DC1685A>

LT, LT, LTC, LTM, Linear Technology and the Linear logo are registered trademarks and PScope is a trademark of Linear Technology Corporation. All other trademarks are the property of their respective owners.

QUICK START PROCEDURE

DC1685A is easy to set up. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Apply power to the DC1685A 3.3V across the pins marked V_{CC} and PWR_GND and 5V across AMP_POWER and PWR_GND. The DC1685A requires up to 800mA from the V_{CC} , and 200mA from the AMP_POWER.
2. Supply power to the DC890B fast DAACS board with an external 6V \pm 0.5V, 1A on turrets G7(+) and G1(-) or the adjacent 2.1mm power jack. Unless the DC890B detects external power, it will not activate the LVDS mode of the Xilinx Spartan-III FPGA. The FPGA actively terminates the LVDS repeaters at the outputs of the LTC2209.
3. Connect encode clock to the DC1685A on the SMA connector marked (J3) Encode Clock. This transformer coupled input is terminated with a 100 Ω at the ADC clock inputs. For best noise performance the clock input must be driven with a very low jitter source. When using a sinusoidal generator, the amplitude should be as large as possible, up to 13dBm. Using bandpass filters on the clock and analog inputs will improve the noise performance by reducing the wideband noise power of the signals. Data sheet FFT plots are taken with 10 pole LC filters made by TTE (Los Angeles, CA) to suppress signal generator harmonics, non-harmonically related spurs and broadband noise. Low phase noise (jitter) Agilent 8644B generators are used with the TTE bandpass filters for the clock and analog input.
4. Connect the analog input to the DC1685A to the SMA connector marked (J6) IN+ at 140MHz. This input is capacitively coupled to a 1:4 balun transformer WBC4-11.
5. Start and configure PScope data collection software for the FastDAACS (DC890) by selecting AutoConfigure. If the board is not detected, update PScope for latest software and device list, and then select LTC2209 from the Configure \rightarrow Device menu. You can also manually configure PScope for the LTC2209 by setting the parameters listed in Table 1.
6. Collect data by clicking on the Collect button. Time and frequency plots will be displayed in the PScope window. Consult the DC890B Quick Start Guide for more details.

This procedure contains only one critical sequence. The user must apply supply voltage before applying signal power to the analog and clock inputs or forcing a voltage to any other turrets. The user must also remove the signal to the analog and clock inputs and voltages on any other turret before turning down the supply voltage.

QUICK START PROCEDURE

Table 2 summarizes the function of each SMA connector and jumper on the board and their suggested default settings.

Table 1. PScope User Configuration for LTC2209.

USER CONFIGURE	
Bits	16
Channels	1
Alignment	16

Bipolar	[x]
Positive Edge Clk	[x]

Table 2. DC1685A Connector and Jumpers

CONNECTOR/ JUMPER	FUNCTION
J2 (MODE)	ADC Output Format and Clock Duty Stabilizer CDS. Default to V_{CC} for twos complement and CDS off.
J3 (SHDN)	ADC Power Shutdown. Default to RUN.
J3 (DITH)	ADC Internal Dither Enable. Default to OFF to disable internal dither.
J4 (PGA)	ADC Programmable Gain Amplifier. Default to 1x gain mode.
J5 (IN-)	Differential Input. Not connected by default. Install capacitor C9 to drive the input differentially.
J6 (IN+)	Differential Input. Connected to input balun for single-ended operation. Drive from a 50Ω signal source. No external termination needed.
J7 (ENCODE CLOCK)	Single-Ended Input. Drive with a 13dBm low jitter 50Ω source.
J11 (OR)	Overrange Output. Connect to an oscilloscope input.

Buffer ADC Interface

The LTC6417 has been specifically designed to interface directly with high speed A/D converters. In Figure 2, the differential LTC6417 outputs are bandpass filtered to drive the differential inputs of the LTC2209. Such a filter suppresses harmonics and limits the wideband noise of the amplifier to achieve the best SFDR and SNR. Table 3 lists component values suggested for bandpass filters optimized for various input frequencies. The 1:4 transformer at the input of the LTC6417 performs a single-ended to differential conversion and provides 6dB voltage gain.

For more detail on the LTC6417 and LTC2209, consult the data sheets.

Table 3. Bandpass Filter Component Values for Various Input Frequencies

COMPONENTS	INPUT FREQUENCIES			
	70MHz	140MHz	270MHz	380MHz
R12 = R36 [Ω]	60.4	60.4	60.4	60.4
C43 = C44 [pF]	56	27	15	12
E1 = E2 [nH]	100	51	27	18
C41 [pF]	47	12	12	10

DEMO MANUAL DC1685A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
